WEB DEVELOPMENT PROJECTS

Trakr. | <Group Project>

Fullstack | 1 week

- Job tracker to organize jobs you are interested in and track where you are in the application and interview process with the ability to save key points of contact, specific skills for the job, and add additional notes.
- Full MERN stack application running on an Express backend API deployed to Heroku with Mongoose ODM connected to MongoDB Atlas. React frontend with React-router-dom routing, Passport for user authentication and React-bootstrap for responsive and accessible design.
- Team followed Agile, TDD, and CI/CD development principles using a feature branch/gitflow workflow.

World Weather | <Solo Project>

Frontend | 1 week | [Live](#) | [Github](#)

- Responsive dashboard to track weather and local time in your choice of cities around the world.
- Built using React, JavaScript, HTML, and CSS using various APIs for data (WeatherAPI.com, Unsplash, Geolocation, and Webstorage).
- Achieved top rank in google search results for several key search terms.

DiveFriendsBonaire.com | <Dive Friends Bonaire>

Frontend | 3 weeks | [Archive](#)

- Designed a fully responsive and dynamic site with a focus on ease of content creation and SEO.
- Created a custom design with HTML, CSS, and PHP running on a Wordpress backend and MySQL database.
- Achieved top rank in google search results for several key search terms.

ReefStoreBonaire.com | <Reef Store Bonaire>

Frontend | 1 week | [Live](#)

- Created a single page site for Reef brand shoe/clothing store on Bonaire.
- Integrated Image carousel, google maps, and email contact form.

TECHNICAL SKILLS

JavaScript | Node | Express | MongoDB | Mongoose | React | Python | Django | PostgreSQL | HTML | CSS | PHP | MySQL
Git | Github | Agile | TDD | Mocha | Chai | React Testing Library | Jest

WORK EXPERIENCE

Web Developer

OPSGEAR / AltCharge

2006-2007 / 2012

- Converted mockups from graphic designer into full dynamic web sites using HTML, CSS, and JavaScript.
- Designed and implemented a custom support ticket tracking system in PHP which dramatically increased CSR productivity and eliminated customer support issues never getting a response.
- Built and integrated a product review application using HTML, CSS and PHP that could be embedded into a 3rd party hosted e-commerce site which only allowed limited HTML and Javascript code in the product page template increasing customer time on page and sales.
